DETAILED ACTION

Response to Amendment

This office action is in response to amendment filed on 1/24/2008. No amendments were made to the previously presented claims.

Allowable Subject Matter

1. Claims 1, 2, 4, 5, 7-9, 11-15, 17, and 19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The invention of the present application pertains to methods and systems for efficient information dissemination within wireless mobile ad hoc networks. The invention provides a routing algorithm between nodes that provides scalability for dynamically changing node density and is optimized for arbitrary node location.

With respect to the claimed invention, the routing algorithm includes the steps of receiving a request to communicate from a source node to a destination, identifying each neighbor node of the source node in the ad hoc network, invoking either a proactive border node broadcast protocol or an on-demand border node broadcast protocol based on the number of hops from the source node to the destination. The novelty of the invention lies in the aforementioned features in combination with the selected broadcast protocol and how a neighbor node is selected to be a border node. The broadcast protocol determines which neighbor node should be designated as a border node by selecting the neighbor

node that has a maximum distance from the source node and a minimum distance to a one of the compass point directions North, South, East, and West. Once the border node is selected the information is broadcast from the source node to the border node and then to the destination node.

Accordingly, Applicant's claims are allowed for these reasons and for the reasons recited by the Applicant in the amendment filed on 1/24/2008.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Xu et al. (US 2005/0063318) - Xu discloses a system and method for providing a notification including location information for nodes in an overlay network (title). In the scope of the invention a source node selects a routing node in a target region based on location information (abstract). In determining the routing node, the source node determines a landmark space, which is logical representation of the physical network in coordinate space, for which a destination node is located. The source node then chooses a routing node based on the selected landmark space (paragraphs 32, 34, 39, and 40). However, Xu does not teach selecting a border node with a distance and

geometric criteria as set forth by the independent claims of the present application.
